

Sulphate of potash

- **Inorganic** fertiliser
- **High in potassium** for **flower** and **fruit** growth (NPK 0: 0:41.5)
- **Flowers and fruit**, particularly useful on **tomatoes**.
- Apply from **April to November**. Application rates:
Base dressing (before planting): 70g/m² (2oz/yd²), spread evenly and work into top 10cm (4 inches of soil) with hoe or rake
Top dressing (after planting): established plants 35g/m² (1oz/yd²) generally, and up to 140g/m² (4 oz/yd²) on fruit trees and bushes in early spring. Work into soil and water well if dry.
